

RFID-Ink™

Benefit Denial / RFID Combination

The **RFID-Ink** is another ALL-TAG innovation that allows retailers to combine EAS and RFID technologies into a single tag. This product is essentially an Ink Tag with an RFID circuit embedded inside of the plastic shell. Retailers can now protect their merchandise from theft, as well as perform inventory tracking, and other RFID related functions.

The **RFID-Ink** can be connected to merchandise using Sensormatic SuperTags®, Checkpoint Mini Tags, and any other AM or RF EAS Tag for a double measure of protection against theft.

We can design the RFID circuits to be fully compatible with a retailer's existing readers and other hardware. The ink tag's shape, color, ink ampules, and pin can also be custom designed to suit the needs of each individual retailer.
