

## **E-Tag™ 4**

The **E-Tag 4** is a high quality alternative to the Sensormatic VST® (Visible Source Tag) and the Sensormatic SuperTag. The **E-Tag 4** is equipped with the same detection antenna found in authentic Sensormatic brand tags, making it compatible with all Sensormatic Ultra\*Max® Systems and more difficult to shield with foil lined bags.

### **E-Tag 4 versus Sensormatic SuperTag**

The difference between the **E-Tag 4** and a SuperTag is the size. At only 2.2 inches (5.6 cm) our **E-Tag 4** is much shorter than the SuperTag. This makes the **E-Tag 4** less bothersome to customers trying on tagged apparel.

### **E-Tag 4 versus Sensormatic VST**

The difference between our **E-Tag 4** and the Sensormatic VST tag is that the **E-Tag 4** is not a one-time use tag. As opposed to the VST tag, the lock inside of an **E-Tag 4** will remain operational after it has been removed from merchandise at the checkout counter. This makes the **E-Tag 4** the perfect tag choice for our economical and environmentally sound Tag Recirculation program for Apparel Source-Tagging.

### **Specifications**

- Frequency: 58 KHz
- Standard Color: Gray
- Pin Style: VST Tacks / SuperTag Tacks
- Compatible with all Sensormatic manual and power detachers
