

USB People Counters

With PC Data Viewing & Analysis

ALL-TAG's completely wireless People Counting System is a reliable, user-friendly, and affordable tool that will help almost any type of business operate more efficiently. The transmitter unit (PTX20-1) transmits two infrared beams to the receiver unit (PRX20U1). When someone passes between the 2 units and breaks the infrared beams, the internal counter increases by one. The data is stored in the actual Counter, and the data can be extracted from the counter via the embedded USB Port. You simply plug a flash drive into the USB Ports on the counters to extract the data, and then connect the flash drive to a PC to download the data. Our special SensorServer software allows users to analyze the data by hour, day, week, month, and year in table or graph form. You can also download the data as a .csv file so that you can view and manipulate the data using Excel. This valuable information reveals peak traffic periods to determine optimal operating hours and staffing requirements, and helps calculate customer/sales conversion ratios.

Specifications:

- Product Code – PTX20-1 / PRX20U1
- Dimensions - 116.4 x 68.6 x 22.3 mm
- Material - ABS Plastic - Black
- Power supply - 2 x 1.5V AA
- Power consumption - Approximately 120 uA
- Battery life - Approximately 4 years
- Maximum counting distance - 33 feet (10 m)
- Data - USB
